# Voice-guided indoor navigation with Situm

- **Spanish startup's indoor positioning and navigation technology includes voice assistance to allow its use to a greater number of users**

**Santiago de Compostela, March 11, 2016.-** **Situm Maps**, the indoor positioning technology of Situm, successfully includes voice assistance in its system, facilitating access to its application to a greater number of people.

## Voice assistance with Situm Maps

A test in As Cancelas mall, Santiago de Compostela (Spain), shows how, besides the user location, destinations and routes, Situm's app can now provide precise and specific instructions by voice.

This not only make easier its use for general public, but it contributes to other groups, for example those with low vision, can take advantage of the benefits of this service on equal terms.

## About Situm

Situm is a worldwide provider of high precision/zero infrastructure indoor location technology, delivering to any mobile user the most accurate position in any venue. From Hospitals, Airports, Malls and Train Stations to Malls, Museums, Public Buildings or cutting-edge smart devices providers, SITUM praised technology is present in endless applications, venues and devices, trying to make life easier for any user, wherever he is, whatever device he has.
